Art Unit: 1712

DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 23-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 23 and 25, the hydrocarbon based fluid cannot be emulsified into the formate or carboxylic salt, but has to be emulsified into the aqueous fluids containing these salts as stated in applicants specification on page 9.

In claims 24 and 25, there is no antecedent basis for "monovalent carboxylic salt".

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1, 11, 12, 17, 20 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Rines (H935).

Art Unit: 1712

Rines teaches a drilling fluid which comprises an invert emulsion which contains a hydrocarbon, a brine comprising a salt such a potassium acetate, and sealing or fluid loss additives such as cement or REV DUST (see examples and Tables). The ratios of oil and water are within the scope of the present invention (see column 4, lines 45-58). Claim 11 does not positively recite that the formate is present, and is thus rejected herein.

5. Claim 14 is rejected under 35 U.S.C. 102(b) as being anticipated by Dobson (5804535).

Dobson teaches a drilling fluid which comprises formate salts alone (Examples 1-7) or in conjunction with a soild weighting agent (Example 8). Applicants method comprises substituting "at least a portion" of a soild weighting agent with an alkali metal formate. Applicants method is just the simple matter of using a formate alone as a weighting agent, or in conjunction with a solids weighting in a drilling fluid. The solids content must be reduced when a formate is used alone, or used to achieve a specific weight when used with a soild weighting agent. Applicants claim is not seen to contain any method steps which distinguish over Dobson.

- 6. Claims 2-10, 13, 15, 18, 19 and 21 are allowable over the art of record.
- 7. Applicants arguments have been considered but are not deemed fully persuasive. As noted by applicant provisional application 60/268520 provides proper

Art Unit: 1712

benefit under 35 USC 119, and thus Krieger is not prior art over the present application. Parlar fails to teach the use of fluid loss or sealing additives to the fluids therein, which would be contrary to the intended use to remove theses substances from the wellbore. Dobson is distinguished from claim 1, since it is directed to water based systems and does not teach the use of hydrocarbons therein. With respect to claim 14, the method is just the simple matter of using a formate alone as a weighting agent, or in conjunction with a solids weighting in a drilling fluid. The solids content must be reduced when a formate is used alone, or used to achieve a specific weight when used with a soild weighting agent. It is well known to use salts to weight drilling fluids to form, solids free or low soilids drilling fluids. Applicants claim is not seen to contain any method steps which distinguish over Dobson.

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 1712

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Philip C Tucker whose telephone number is 571-272-1095. The examiner can normally be reached on Monday - Friday, Flexible schedule.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on 571-272-1119. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
